Holaluz and Zunder join forces to integrate solar energy and charging solutions in electric mobility

- Zunder users will be able to benefit from a 500€ discount on photovoltaic panel installation with Holaluz and €60 for each new electricity contract.
- Holaluz customers with electric vehicles will enjoy six months of free subscription to Zunder's ultra-fast charging network.
- This alliance reinforces Zunder's commitment to connected, simple and efficient electric mobility by backing 100% green energy

Barcelona, 20 October 2022.

Holaluz, the leading green energy technology company in distributed generation and storage, and Zunder, the reference operator in ultra-fast charging solutions for electric vehicles in Europe, have sealed a strategic alliance to accelerate the transition towards more accessible, efficient, and sustainable electric mobility. Under the slogan "Transforming electric mobility", both companies offer exclusive advantages to their respective customer communities, connecting green energy at home with an intelligent charging network and integrated services.

Green energy at home, savings on the road

Thanks to this agreement, Zunder users will be able to access a direct discount of €500 on solar panel installation with Holaluz for their detached house or a discount of €60 for setting up an electricity supply (electricity connection) for a flat or house with the company. This facilitates access to a self-consumption model that allows charging the electric vehicle at home with 100% green energy at practically zero cost.

Meanwhile, Holaluz users with electric vehicles will enjoy six months of free subscription to the Zunder app, valued at €60, and access to subsidised tariffs to charge at their network of ultra-fast stations, the best-rated by electric vehicle users in Spain.

This alliance strengthens the ecosystem that Zunder is building around connected and accessible electric mobility, aligning with the vision shared by both companies to accelerate the energy transition, both on the road and at home.

A collaboration in service of the energy transition

The alliance between Holaluz and Zunder responds to a shared vision: to provide citizens with real tools to advance towards emission-free mobility, integrating self-consumption, storage, and efficient charging technologies into a single energy ecosystem.

"With this collaboration, we take another step in our purpose of connecting people to green energy, including when they move. We want charging the electric car with solar energy to be the easiest and most natural thing in the world," noted Carlota Pi, Executive President of Holaluz.

For his part, David Huete, Business Development Director at Zunder, stated: *"At Zunder, we are committed to strategic alliances focused on accelerating electric mobility. Having partners like Holaluz, who share our vision of a sustainable future, allows us to offer comprehensive solutions that connect home and road with 100% green energy."*

The union of Holaluz and Zunder offers a comprehensive solution that connects home, vehicle, and public infrastructure under the same vision: an emission-free future based on clean energy managed efficiently.
